Manjunatha K H

Java Backend Developer

+91 7760124976 | Bengaluru, Karnataka | khmanjunatha405@gmail.com | linkedin.com/in/manjunatha-k-h | github.com/manjuram07

PROFESSIONAL SUMMARY

Java Backend Developer with around **3 years of experience** designing, developing, and maintaining enterprise backend applications using **Java, Spring Boot, RESTful APIs, and Microservices architecture**. Hands-on experience with **Apache Kafka, Spring Data JPA, Hibernate, Spring Security, Resilience4j, and WebClient** for building reliable and event-driven backend services. Experienced in **SQL and database optimization, production troubleshooting, CI/CD automation, and automated testing** using JUnit and Mockito. Worked on enterprise applications across the **banking and automotive domains**.

SKILLS

Programming Languages: Core Java, Java 8/11/17, Collections, Streams, Multithreading, Object-Oriented Programming (OOP)

Backend Frameworks: Spring Boot 3.x, Spring MVC, Hibernate, Spring Data JPA, Spring Security, Spring Cloud

Databases: MySQL, PostgreSQL (RDBMS), Liquibase

Microservices Architecture: RESTful Web Services, Eureka, Resilience4j, WebClient, Apache Kafka

Observability & API Tools: ELK Stack, SonarQube, JaCoCo, Postman, Swagger

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Jenkins (CI/CD), Maven, Git, Jira

Architecture & Design: SOLID Principles, Design Patterns, API Design, Data Structures and Algorithms (DSA)

PROFESSIONAL EXPERIENCE

Java Backend Developer

August 2025 – January 2026

Nityo Infotech | Vendor: Kyndryl | Client: Mercedes-Benz

Bengaluru, India

Project*: *Software Station / Tankstelle: *Application used for release-specific conversion of flashable and codeable control units during vehicle development. Integration with DTS Monaco enables software flashing and control-unit updates.*

- Developed and maintained Spring Boot microservices for enterprise automotive workflows, applying modular service design to improve system reliability and maintainability.
- Resolved production issues by analyzing distributed logs using **ELK Stack** and code debugging, reducing API error rates by **15–20%.**
- Automated database schema migrations using **Liquibase** with version-controlled changesets, reducing manual database effort.
- Built Jenkins **CI/CD pipelines** with **SonarQube** quality gates, automating build, test, and release stages to improve deployment consistency across environments.
- Collaborated with **product owners, QA teams,** and **DevOps** to clarify requirements, complete code reviews, and deliver high-quality features aligned with business objectives.

System Engineer

June 2022 – September 2024

Infosys Limited | Client: Citizens Bank

Mysuru, India

Project: Digital Banking Application: *A secure, scalable microservices-based digital banking platform enabling customers to manage accounts, perform fund transfers, and access transaction history in real-time. The application was integrated with internal banking systems and third-party financial services, supporting high availability and data consistency.*

- Developed and maintained Spring Boot microservices for core banking workflows, handling **5M+ requests/day** across multiple services, supporting independent service deployment and scalability.
- Performed **root cause analysis (RCA)** and debugging across banking services, improving system stability and reducing production issues.
- **Improved database query performance by 20%** by optimizing SQL indexes and resolving Hibernate N+1 query issues across frequently accessed banking operations.
- Integrated **SOAP** and **REST APIs** with external and legacy systems to support data exchange across banking applications.
- Implemented unit and integration tests using JUnit and Mockito, achieving **85%+ code coverage** and improving code reliability.
- Collaborated with cross-functional teams through **Agile** ceremonies and participated in **sprint planning** and **story estimation**.

PROJECTS

E-Commerce Platform | **GitHub Link**

Tech Stack: *Java 17, Spring Boot, Spring Cloud, Spring Security, MySQL*

- Designed and implemented a backend e-commerce application using **Spring Boot and Microservices architecture**, following CRUD operation, validation, global exception handling, pagination, layered design and REST principles.
- Implemented **Spring Cloud Gateway** as the API Gateway for centralized request routing to downstream microservices.
- Implemented **Netflix Eureka** for service discovery, enabling dynamic registration and resolution of microservices without hardcoded service URLs.
- Implemented **Resilience4j Circuit Breaker** to prevent cascading failures, to improve fault tolerance and reduce latency.
- Designed **Apache Kafka** for asynchronous, event-driven communication between services, reducing service coupling and improving scalability.
- Implemented secure API access using Spring Security with **OAuth2** and **JWT**-based **authentication** and **authorization**, supporting protected service interactions.
- Containerized services using Docker and deployed the application on **AWS EC2**, with **AWS RDS** for relational database hosting and **S3** for object storage.
- Applied OOP, SOLID Principles, Design Pattern, and time/space complexity analysis to build maintainable, performance-efficient solutions.

EDUCATION

Bachelor of Engineering in Computer Science — September 2018 – August 2021
Bangalore Institute of Technology — Bengaluru, India

Diploma in Computer Science — June 2015 – July 2018
Government Polytechnic, Harapanahalli — Davanagere, India

CERTIFICATIONS

- Infosys Certified Java SE 8 Developer
- Infosys Certified Spring Boot Developer
- Microservices with Spring Boot, Spring Cloud, Docker & Kafka — Udemy (2026)
- Generative AI Foundational Certificate — Udemy (2026)
